

# The Children's Administration and Serving Pregnant Women with SUD

Lynée Brown, MA, CDP  
Clinical Supervisor of Counseling  
Swedish Addiction Recovery Services  
March 28, 2019

---

---

---

---

---

---

---

---

## Objectives

Recognize the complexity of mandated reporting.

Identify effective approaches of supporting pregnant and postpartum women with SUDs and Children's Administration involvement.

---

---

---

---

---

---

---

---

## Health Related Stigma

*Socio-cultural process in which social groups are devalued, rejected, and excluded on the basis of a socially discredited health condition.*

Stereotypes of those with SUD :

---

---

---

---

---

---

---

---

## Health Related Stigma

*Socio-cultural process in which social groups are devalued, rejected, and excluded on the basis of a socially discredited health condition.*

Stereotypes of those with SUD :

- Perception of choice—moral deficit by which the person has control
- Lazy
- Liars and criminals
- Poverty
- Symbolically linked to other stigmatized health conditions
- Re: PG women with SUD—“She doesn’t care about her baby”

SUD more stigmatized than any other health condition

---

---

---

---

---

---

---

---

## Levels of Stigma

Self

- Self loathing
- Self blame

Social

- Responses of anger
- Coercion
- Punishment
- Avoidance

Structural

- Rules and policies
- Institutional procedures that restrict rights and opportunities

---

---

---

---

---

---

---

---

## Healthcare Professionals & Stigma toward SUD

Professionals’ attributions about patients with SUD:

- SUD result of poor choices
- Perceived as manipulative, aggressive, and rude
- Not vested in their own health
- Overuse system resources
- Abuse the system through drug seeking and diversion

Results of provider stigma:

- Patients perceive discrimination—diminished therapeutic alliance
- Patients conceal SUD → SUD under-diagnosed → SUD tx needs go unmet
- Patients less likely to complete SUD tx
- Misattribution of physical illness symptoms to SUD
- Hesitation to prescribe pharmacological tx for other illness
- Shorter visits and more task-oriented

---

---

---

---

---

---

---

---

 STIGMA ALERT!

---

---

---

---

---

---

---

 Risk Factors for Child Maltreatment and Child Welfare Involvement:

- Prenatal Substance Abuse (31% of foster care placements in 2012)
- Failure to Obtain Medical Care
- Domestic Violence
- Corporal Punishment
- Unsupervised or “Latchkey” Children

---

---

---

---

---

---

---

 Role of Co-occurring Issues

- Mental health issues
  - >33% of adults with SUD have co-occurring mental health illness
  - Postpartum women with SUD have high rates of PTSD
- Social isolation
- Poverty
- Unstable housing
- Domestic violence
- 

---

---

---

---

---

---

---

### Child Welfare Laws and Prenatal Substance Exposure

#### The Child Abuse Prevention and Treatment Act (CAPTA)

- Healthcare personnel to notify CPS of "substance exposed newborns"
- Provide safe care of "substance affected infants"

#### Comprehensive Addiction and Recovery Act of 2016 (CARA)

- "Illegal" removed from CAPTA specifications of substance use
- Safe plans of care must include families/caretakers in addition to infants
- Increased data requirements

#### Keeping Children Safe Act (2003)

- Address needs of infants born and identified as "affected by illegal substance abuse" or "withdrawal symptoms resulting from drug exposure"

---

---

---

---

---

---

---

---

### Risk factors that the CA considers with prenatal substance use:

- Mother's focus
- Frequency
- Timing
- Type of substances used
- Co-occurring environmental issues
- Extent of prenatal care
- Prior referral to DCYF

*Research suggests some of the negative outcomes of prenatal substance exposure can be improved by supportive home environments and positive parenting practices. (NIDA, 2011)*

---

---

---

---

---

---

---

---

### Substance Affected or Exposed?

The distinction can be misleading...

#### Medication Assisted Treatment (MAT) for Opiate Use Disorder (OUD)

- NAS itself is not the danger
- NAS is not an indicator of social stability

#### Unintended Consequences are grave:

- Pregnant women fear CA involvement, therefore avoid MAT
- Detox from opiates in pregnancy is highly ineffective (>90% relapse)

---

---

---

---

---

---

---

---

### Mandated Reporting

- *...it's confusing*
- "Clear and present danger to the child's health, welfare, or safety"
- "When there is a reasonable cause to believe a child has been abused or neglected"
- If you believe there is a risk
- Positive toxicology, FAS suspicion, withdrawal symptoms
- Reports must include thorough information, such as: issues/behaviors, risk factors, and positive supports observed during interaction with the family

---

---

---

---

---

---

---

---

### Fear of Detection is often paralyzing

PG women more likely to fear detection if:

- Using illegal substances
- Previous CPS involvement
- Heard negative experiences from peers
- Uncertain about the rules (e.g. UAs/other drug testing, what triggers CPS referral)

---

---

---

---

---

---

---

---

### Having the Conversation...

Topic of CPS is wrought with fear and outrage for families with SUD—  
**PROCEED CAREFULLY**

CPS requirements often feel mysterious to parents

Encourage the parent(s) to consider their situation through the lens of CA

---

---

---

---

---

---

---

---

### Finding Common Ground

**THIS IS THE MOST IMPORTANT SLIDE!**

Build Alignment with the 4 Ss:

- **Sobriety**—mom with strong support plan for recovery
- **Stability**—living situation
- **Safety**—people around mom and baby are sober, safe, and stable
- **Support**—family, community, services...

*Affirm, affirm, AFFIRM any and all of what she already has in her favor.*

---

---

---

---

---

---

---

---

### Services provided through CA may include:

- Home support specialist services
- Day care
- Foster family care
- Financial and employment services
- Parent aides
- Mental health services (ie counseling)
- Psychological and psychiatric services
- Parenting and child management classes
- Self-help groups
- Family preservation services
- Shelter care

---

---

---

---

---

---

---

---

### Shift the Focus

#### Social Determinants of Health

- Living/social environment is greater predictor of outcome than substance used

#### Promote the well being of a baby whose mother is using illicit substances:

- (In pregnancy) Shift the focus from birth and brain defects to preventing obstetrical harm
- Promote a sober environment for child rearing
- Affirm her intentions

- Needs of the mother and fetus/infant are intertwined—supporting one means supporting the other

- Early bonding facilitates commitment to sober, safe environments—recovery

---

---

---

---

---

---

---

---

 **Trauma Informed Care**

Providing Trauma Informed Care:

- **Realizing—Recognizing—Responding**
- Shifting attributions

*“Not everyone needs to know about it, but everyone needs to know something.”*

“Universal Precautions” (especially important for pregnant women with SUD)

- Most have been exposed to abuse, violence, neglect, or other trauma
- Assume she is coping the best she can
- Place priority on providing safety, choice, and control

*The mother’s feelings are her work, not yours*

---

---

---

---

---

---

---

---

---

---

 **Increased Support for Professionals**

Healthcare professional’s therapeutic commitment to those with SUD strengthened by:

- More training (focused on building efficacy in interviewing skills and recognizing own biases—MI)
- Role support by colleagues/supportive work environment
- Adequate time to address the complexities of SUD
- Longitudinal exposure to patients’ stories
- Personal experience with SUD

Ask for help!

---

---

---

---

---

---

---

---

---

---

 **Racial Disproportionality in WA State**

The population of children of color in the child welfare system is higher than the population of children of color in the general population.

Greatest disproportionality occurs when:

- Initial referral to CA is made
- Decision to remove children from the home
- Child is in placement for over two years

Source: Bureau of the Census, "Prisoners in 2008," U.S. Department of Justice, Bureau of Prisons, Washington, DC: November 2009.

---

---

---

---

---

---

---

---

---

---

## Racial Disproportionality and Successful Outcomes

- Be culturally aware and sensitive, as well as aware of one's own bias
- Identify and understand the importance of a child's natural community including family (maternal and paternal), ethnicity, race, and cultural ties
- Identify the child's tribal affiliation; if there is more than one identify all potential tribal connections
- Identify if a child is receiving services from a tribe or Native American Association
- Team with the community to provide protection and higher quality service delivery

*History, despite its wrenching pain, cannot be unlived,  
but if faced with courage, need not be lived again.*  
~Maya Angelou
